## Gross Domestic Product, Fourth Quarter and Year 2021 (Second Estimate)

**Real gross domestic product** (GDP) increased at an annual rate of 7.0 percent in the fourth quarter of 2021 (table 1), according to the "second" estimate released by the Bureau of Economic Analysis. In the third quarter, real GDP increased 2.3 percent.

The GDP estimate released today is based on more complete source data than were available for the "advance" estimate issued last month. In the advance estimate, the increase in real GDP was 6.9 percent. The updated estimates primarily reflected upward revisions to nonresidential fixed investment, state and local government spending, and residential fixed investment that were partly offset by downward revisions to personal consumption expenditures (PCE) and exports (refer to "Updates to GDP").

The increase in **real GDP** primarily reflected increases in private inventory investment, exports, PCE, and nonresidential fixed investment that were partly offset by decreases in both federal and state and local government spending. Imports, which are a subtraction in the calculation of GDP, increased (table 2).

### COVID-19 Impact on the Fourth-Quarter 2021 GDP Estimate

The increase in fourth quarter GDP reflected the continued economic impact of the COVID-19 pandemic. In the fourth quarter, COVID-19 cases resulted in continued restrictions and disruptions in the operations of establishments in some parts of the country. Government assistance payments in the form of forgivable loans to businesses, grants to state and local governments, and social benefits to households all decreased as provisions of several federal programs expired or tapered off. The full economic effects of the COVID-19 pandemic cannot be quantified in the GDP estimate for the fourth quarter because the impacts are generally embedded in source data and cannot be separately identified. For more information, refer to the [Technical Note](#) and [Federal Recovery Programs and BEA Statistics](#).

The increase in private inventory investment was led by retail and wholesale trade industries. Within retail, inventory investment by motor vehicle dealers was the leading contributor. The increase in exports reflected increases in both goods and services. The increase in exports of goods was widespread, and the leading contributors were consumer goods, foods, feeds, and beverages, as well as industrial supplies and materials. The increase in exports of services was led by travel. The increase in PCE primarily reflected an increase in services, led by health care, financial services and insurance, and transportation. The increase in nonresidential fixed investment primarily reflected an increase in intellectual property products that was partly offset by a decrease in structures.

The decrease in federal government spending primarily reflected a decrease in defense spending on intermediate goods and services. The decrease in state and local government spending reflected a decrease in gross investment (led by new educational structures). The increase in imports primarily reflected an increase in goods (led by non-food and non-automotive consumer goods, as well as capital goods).

Real GDP accelerated in the fourth quarter, increasing 7.0 percent after increasing 2.3 percent in the third quarter. The acceleration in real GDP primarily reflected upturns in exports and residential investment, and accelerations in private inventory investment and consumer spending, that were partly offset by a downturn in state and local government spending. Imports accelerated.

**Current-dollar GDP** increased 14.6 percent at an annual rate, or \$806.2 billion, in the fourth quarter to a level of \$24.01 trillion. In the third quarter, GDP increased 8.4 percent, or \$461.3 billion (table 1 and table 3). More information on the source data that underlie the estimates is available in the "[Key Source Data and Assumptions](#)" file.

The **price index for gross domestic purchases** increased 7.0 percent in the fourth quarter, an upward revision of 0.1 percentage point (table 4). The **PCE price index** increased 6.3 percent, a downward revision of 0.2 percentage point. Excluding food and energy prices, the PCE price index increased 5.0 percent, an upward revision of 0.1 percentage point.

## Updates to GDP

The increase in fourth-quarter real GDP was revised up 0.1 percentage point from the “advance” estimate. The updated estimates reflected upward revisions to nonresidential fixed investment, state and local government spending, and residential fixed investment that were partly offset by downward revisions to consumer spending, exports, and federal government spending. Imports were revised down. For more information, refer to the [Technical Note](#). For information on updates to GDP, refer to the "Additional Information" section that follows.

	<u>Advance Estimate</u>	<u>Second Estimate</u>
	(Percent change from preceding quarter)	
Real GDP	6.9	7.0
Current-dollar GDP	14.3	14.6
Gross domestic purchases price index	6.9	7.0
PCE price index	6.5	6.3
PCE price index excluding food and energy	4.9	5.0

## Updates to Third-Quarter Wages and Salaries

In addition to presenting updated estimates for the fourth quarter, today's release presents revised estimates of third-quarter 2021 wages and salaries, personal taxes, and contributions for government social insurance, based on updated data from the Bureau of Labor Statistics Quarterly Census of Employment and Wages program. Wages and salaries are now estimated to have increased \$306.8 billion in the third quarter, an upward revision of \$27.7 billion. With the incorporation of these new data, real gross domestic income is now estimated to have increased 6.4 percent in the third quarter, an upward revision of 0.6 percentage point from the previously published estimate.

## GDP for 2021

**Real GDP** increased 5.7 percent, unchanged from the prior estimate, in 2021 (from the 2020 annual level to the 2021 annual level), in contrast to a decrease of 3.4 percent in 2020 (table 1). The increase in real GDP in 2021 reflected increases in all major components, led by PCE, nonresidential fixed investment, exports, residential fixed investment, and private inventory investment. Imports increased (table 2).

The increase in PCE reflected increases in both goods and services. Within goods, the leading contributors were "other" nondurable goods (including games and toys as well as pharmaceuticals), clothing and footwear, and recreational goods and vehicles. Within services, the leading contributors were food services and accommodations as well as health care. The increase in nonresidential fixed investment reflected increases in equipment (led by information processing equipment) and in intellectual property products (led by software as well as research and development) that were partly offset by a decrease in structures (widespread across most categories). The increase in exports reflected an increase in goods (mainly non-automotive capital goods) that was partly offset by a decrease in services (led by travel as well as royalties and license fees). The increase in residential fixed investment

mainly reflected an increase in new single family construction. The increase in private inventory investment primarily reflected an increase in wholesale trade (mainly in durable goods industries).

**Current-dollar GDP** increased 10.1 percent (revised), or \$2.10 trillion, in 2021 to a level of \$23.00 trillion, in contrast to a decrease of 2.2 percent, or \$478.9 billion, in 2020 (tables 1 and 3).

The **price index for gross domestic purchases** increased 3.9 percent, unchanged from the prior estimate, in 2021, compared with an increase of 1.2 percent in 2020 (table 4). Similarly, the **PCE price index** increased 3.9 percent, unchanged from the prior estimate, compared with an increase of 1.2 percent. Excluding food and energy prices, the PCE price index increased 3.3 percent, unchanged from the prior estimate, compared with an increase of 1.4 percent.

Measured from the fourth quarter of 2020 to the fourth quarter of 2021, real GDP increased 5.6 (revised) percent during the period (table 6), in contrast to a decrease of 2.3 percent from the fourth quarter of 2019 to the fourth quarter of 2020.

The price index for gross domestic purchases, as measured from the fourth quarter of 2020 to the fourth quarter of 2021, increased 5.6 percent (revised), compared with an increase of 1.4 percent from the fourth quarter of 2019 to the fourth quarter of 2020. The PCE price index increased 5.5 percent, unchanged from the prior estimate, compared with an increase of 1.2 percent. Excluding food and energy, the PCE price index increased 4.6 percent, unchanged from the prior estimate, compared with an increase of 1.4 percent.

#### Annual Update of the National Economic Accounts

BEA will release results from the 2022 annual update of the National Economic Accounts, which includes the National Income and Product Accounts as well as the Industry Economic Accounts, on September 29, 2022. This update will present revised statistics for GDP, GDP by Industry, and gross domestic income that cover the first quarter of 2017 through the first quarter of 2022. Refer to BEA's recent blog post, "[National, Industry, and State Annual Updates Will Be United in 2022](#)", for additional detail. More information on the 2022 annual update will be included on BEA's website as well as in a forthcoming *Survey of Current Business* article, "GDP and the Economy."

## Additional Information

### Resources

Additional resources available at [www.bea.gov](http://www.bea.gov):

- Information on COVID-19 and recovery impacts is available on our [website](#).
- Stay informed about BEA developments by reading the BEA [blog](#), signing up for BEA's [email subscription service](#), or following BEA on Twitter [@BEA\\_News](#).
- Historical time series for these estimates can be accessed in BEA's [interactive data application](#).
- Access BEA data by registering for BEA's data [application programming interface](#) (API).
- For more on BEA's statistics, refer to our monthly online journal, the [Survey of Current Business](#).
- BEA's [news release schedule](#)
- [NIPA Handbook](#): Concepts and Methods of the U.S. National Income and Product Accounts

### Definitions

**Gross domestic product** (GDP), or **value added**, is the value of the goods and services produced by the nation's economy less the value of the goods and services used up in production. GDP is also equal to the sum of personal consumption expenditures, gross private domestic investment, net exports of goods and services, and government consumption expenditures and gross investment.

**Gross domestic income** (GDI) is the sum of incomes earned and costs incurred in the production of GDP. In national economic accounting, GDP and GDI are conceptually equal. In practice, GDP and GDI differ because they are constructed using largely independent source data.

**Gross output** is the value of the goods and services produced by the nation's economy. It is principally measured using industry sales or receipts, including sales to final users (GDP) and sales to other industries (intermediate inputs).

**Current-dollar estimates** are valued in the prices of the period when the transactions occurred—that is, at "market value." Also referred to as "nominal estimates" or as "current-price estimates."

**Real values** are inflation-adjusted estimates—that is, estimates that exclude the effects of price changes.

The **gross domestic purchases price index** measures the prices of final goods and services purchased by U.S. residents.

The **personal consumption expenditure price index** measures the prices paid for the goods and services purchased by, or on the behalf of, "persons."

**Personal income** is the income received by, or on behalf of, all persons from all sources: from participation as laborers in production, from owning a home or business, from the ownership of financial assets, and from government and business in the form of transfers. It includes income from domestic sources as well as the rest of world. It does not include realized or unrealized capital gains or losses.

**Disposable personal income** is the income available to persons for spending or saving. It is equal to personal income less personal current taxes.

**Personal outlays** is the sum of personal consumption expenditures, personal interest payments, and personal current transfer payments.

**Personal saving** is personal income less personal outlays and personal current taxes.

The **personal saving rate** is personal saving as a percentage of disposable personal income.

**Profits from current production**, referred to as corporate profits with inventory valuation adjustment (IVA) and capital consumption (CCAdj) adjustment in the National Income and Product Accounts (NIPAs), is a measure of the net income of corporations before deducting income taxes that is consistent with the value of goods and services measured in GDP. The IVA and CCAdj are adjustments that convert inventory withdrawals and depreciation of fixed assets reported on a tax-return, historical-cost basis to the current-cost economic measures used in the national income and product accounts. Profits for domestic industries reflect profits for all corporations located within the geographic borders of the United States. The rest-of-the-world (ROW) component of profits is measured as the difference between profits received from ROW and profits paid to ROW.

For more definitions, refer to the [Glossary: National Income and Product Accounts](#).

## Statistical conventions

**Annual-vs-quarterly rates.** Quarterly seasonally adjusted values are expressed at annual rates, unless otherwise specified. This convention is used for BEA's featured, seasonally adjusted measures to facilitate comparisons with related and historical data. For details, refer to the FAQ "[Why does BEA publish estimates at annual rates?](#)"

Quarterly not seasonally adjusted values are expressed only at quarterly rates.

**Percent changes.** Percent changes in quarterly seasonally adjusted series are displayed at annual rates, unless otherwise specified. For details, refer to the FAQ "[How is average annual growth calculated?](#)" and "[Why does BEA publish percent changes in quarterly series at annual rates?](#)" Percent changes in quarterly not seasonally adjusted values are calculated from the same quarter one year ago. All published percent changes are calculated from unrounded data.

**Calendar years and quarters.** Unless noted otherwise, annual and quarterly data are presented on a calendar basis.

**Quantities and prices.** Quantities, or "real" volume measures, and prices are expressed as index numbers with a specified reference year equal to 100 (currently 2012). Quantity and price indexes are calculated using a Fisher-chained weighted formula that incorporates weights from two adjacent periods (quarters for quarterly data and annuals for annual data). For details on the calculation of quantity and price indexes, refer to Chapter 4: Estimating Methods in the [NIPA Handbook](#).

**Chained-dollar values** are calculated by multiplying the quantity index by the current dollar value in the reference year (2012) and then dividing by 100. Percent changes calculated from real quantity indexes and chained-dollar levels are conceptually the same; any differences are due to rounding. Chained-dollar values are not additive because the relative weights for a given period differ from those of the reference year. In tables that display chained-dollar values, a "residual" line shows the difference between the sum of detailed chained-dollar series and its corresponding aggregate.

## Updates to GDP

BEA releases three vintages of the current quarterly estimate for GDP. "Advance" estimates are released near the end of the first month following the end of the quarter and are based on source data that are incomplete or subject to further revision by the source agency. "Second" and "third" estimates are released near the end of the second and third months, respectively, and are based on more detailed and more comprehensive data as they become available.

The table below shows the average revisions to the quarterly percent changes in real GDP between different estimate vintages, without regard to sign.

Vintage	Average Revision Without Regard to Sign (percentage points, annual rates)
Advance to second	0.5
Advance to third	0.6
Second to third	0.3

Note - Based on estimates from 1996 through 2020. For more information on GDP updates, refer to [Revision Information](#) on the BEA website.

Annual and comprehensive updates are typically released in late July. Annual updates generally cover at least the 5 most recent calendar years (and their associated quarters) and incorporate newly available major annual source data as well as some changes in methods and definitions to improve the accounts. Comprehensive (or benchmark) updates are carried out at about 5-year intervals and incorporate major periodic source data, as well as major conceptual improvements.

Unlike GDP, advance current quarterly estimates of GDI and corporate profits are not released because data on domestic profits and on net interest of domestic industries are not available. For fourth quarter estimates, these data are not available until the third estimate.

GDP by industry and gross output estimates are released with the third estimate of GDP.

<sup>r</sup> Revised. Revisions include changes to series affected by the incorporation of revised wage and salary estimates for the third quarter of 2021.

1. Real gross domestic income is gross domestic income deflated by the implicit price deflator for gross domestic product.

Note. Users are cautioned that particularly for components that exhibit rapid change in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series. For accurate estimates of the contributions to percent changes in real gross domestic product, use table 2.

<sup>r</sup> Revised. Revisions include changes to series affected by the incorporation of revised wage and salary estimates for the third quarter of 2021.

<sup>1</sup> Real gross domestic income is gross domestic income deflated by the implicit price deflator for gross domestic product.

Note. Users are cautioned that particularly for components that exhibit rapid change in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series. For accurate estimates of the contributions to percent changes in real gross domestic product, use table 2.

r Revised

1. Food excludes personal consumption expenditures for purchased meals and beverages, which are classified in food services.

2. This index is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most implicit prices (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

r Revised

1. Gross domestic income deflated by the implicit price deflator for gross domestic product.

2. Food excludes personal consumption expenditures for purchased meals and beverages, which are classified in food services.

3. This index is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most implicit prices (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

Note. Estimates under the *Percent change from the preceding year* columns are calculated from annual data. Estimates under the *Percent change from fourth quarter to fourth quarter* columns are calculated from fourth quarter values relative to the same quarter one year prior.

<sup>r</sup> Revised. Revisions include changes to series affected by the incorporation of revised wage and salary estimates for the third quarter of 2021.

1. Gross domestic income deflated by the implicit price deflator for gross domestic product.

2. Food excludes personal consumption expenditures for purchased meals and beverages, which are classified in food services.

3. This index is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most implicit prices (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

<sup>r</sup> Revised. Revisions include changes to series affected by the incorporation of revised wage and salary estimates for the third quarter of 2021.

1. Personal income is also equal to national income less corporate profits with inventory valuation and capital consumption adjustments, taxes on production and imports less subsidies, contributions for government social insurance, net interest and miscellaneous payments, business current transfer payments (net), and current surplus of government enterprises, plus personal income receipts on assets, and personal current transfer receipts.

2. The current-dollar measure is deflated by the implicit price deflator for personal consumption expenditures.
