FOR RELEASE AT 8:30 AM EST, THURSDAY, JANUARY 16, 2025

ADVANCE MONTHLY SALES FOR RETAIL AND FOOD SERVICES, DECEMBER 2024

Release Number: CB25-08

January 16, 2025 — The U.S. Census Bureau announced the following advance estimates of U.S. retail and food services sales for December 2024:

Advance Estimates of U.S. Retail and Food Services

Advance estimates of U.S. retail and food services sales for December 2024, adjusted for seasonal variation and holiday and trading-day differences, but not for price changes, were \$729.2 billion, an increase of 0.4 percent (±0.5 percent)* from the previous month, and up 3.9 percent (±0.5 percent) from December 2023. Total sales for the 12 months of 2024 were up 3.0 percent (±0.5 percent) from 2023. Total sales for the October 2024 through December 2024 period were up 3.7 percent (±0.5 percent) from the same period a year ago. The October 2024 to November 2024 percent change was revised from up 0.7 percent (±0.5 percent) to up 0.8 percent (±0.3 percent).

Retail trade sales were up 0.6 percent (±0.5 percent) from November 2024, and up 4.2 percent (±0.5 percent) from last year. Motor vehicle and parts dealers were up 8.4 percent (±1.8 percent) from last year, while Nonstore retailers were up 6.0 percent (±1.4 percent) from December 2023.

General Information

The January 2025 Advance Monthly Retail report is scheduled for release on February 14, 2025 at 8:30 a.m. EST. View the full schedule in the Economic Briefing Room: https://www.census.gov/economic-indicators/. The full text and tables of this release can be found at www.census.gov/retail/.

Intention to Revise

Monthly retail sales estimates will be revised to reflect historical corrections and will reflect the restated results of the 2022 Annual Retail Trade Survey and the Service Annual Survey. Estimates will be restated to incorporate the 2017 North American Industry Classification System (NAICS) changes. In addition to the 2017 NAICS changes, the restated data will represent employer-only firms to be aligned with the Annual Integrated Economic Survey (AIES) and the Economic Census. For a detailed description of these changes, please see the Restatement Summary. Publication tables will be reformatted to incorporate the 2017 NAICS definitions. Revised not adjusted estimates and corresponding adjusted estimates are scheduled for release on April 25, 2025 at 10:00 a.m. EDT.

EXPLANATORY NOTES

The advance estimates are based on a subsample of the Census Bureau's full retail and food services sample. A stratified random sampling method is used to select approximately 4,800 retail and food services firms whose sales are then weighted and benchmarked to represent the complete universe of over three million retail and food services firms. For more information on how data is collected for the Advance Monthly Retail Trade Survey, see our methodology page at:

https://www.census.gov/retail/marts/how-surveys are collected.html>.

Survey Description

The U.S. Census Bureau conducts the Advance Monthly Retail Trade and Food Services Survey to provide an early estimate of monthly sales by kind of business for retail and food service firms located in the United States. Each month, questionnaires are mailed to a probability sample of approximately 4,800 employer firms selected from the larger Monthly Retail Trade Survey. Advance sales estimates are computed using a link relative estimator. For each detailed industry, we compute a ratio of current-toprevious month weighted sales using data from units for which we have obtained usable responses for both the current and previous month. For each detailed industry, the advance total sales estimates for the current month is computed by multiplying this ratio by the preliminary sales estimate for the previous month (derived from the larger MRTS) at the appropriate industry level. Total estimates for broader industries are computed as the sum of the detailed industry estimates. The link relative estimate is used because imputation is not performed for most nonrespondents in MARTS. For a limited number of nonresponding companies that have influential effects on the estimates, sales may be estimated based on historical performance of that company. The monthly estimates are benchmarked to the annual survey estimates from the Annual Retail Trade Survey once available. The estimates are adjusted for seasonal variation and holiday and trading day differences. Additional information on MARTS and MRTS can be found on the Census Bureau website at: < www.census.gov/retail>.

Reliability of Estimates

Because the estimates presented in this report are based on a sample survey, they contain sampling error and nonsampling error.

Sampling error is the difference between the estimate and the result that would be obtained from a complete enumeration of the sampling frame conducted under the same survey conditions. This error occurs because only a subset of the entire sampling frame is measured in a sample survey. Standard errors and coefficients of variation (CV), as given in Table 3 of this report, are estimated measures of sampling variation.

The margin of sampling error, as used on page 1, gives a range about the estimate which is a 90 percent confidence interval. If, for example, the percent change estimate is ± 1.2 percent and its estimated standard error is 0.9 percent, then the margin of sampling error is $\pm 1.753 \times 0.9$ percent or ± 1.6 percent, and the 90 percent confidence interval is ± 0.4 percent to ± 0.4 percent. If the interval contains 0, then one does not have sufficient evidence to conclude at the 90 percent confidence level that the change is different from zero and therefore the change is not statistically significant. Estimated changes shown in the text are statistically significant unless otherwise noted. For a monthly total, the median estimated coefficient of variation is given. The resulting confidence interval is the estimated value $\pm 1.753 \times CV \times (the$ estimated monthly total). The Census Bureau recommends that individuals using estimates in this report incorporate this information into their analyses, as sampling error could affect the conclusions drawn from the estimates.

Nonsampling error encompasses all other factors that contribute to the total error of a sample survey estimate. This type of error can occur because of nonresponse, insufficient coverage of the universe of retail businesses, mistakes in the recording and coding of data, and other errors of collection, response, coverage, or processing. Although nonsampling error is not measured directly, the Census Bureau employs quality control procedures throughout the process to minimize this type of error.

Weather Information

For information on the impact of weather events like Hurricanes Helene and Milton on the compilation of this report, please see the Frequently Asked Questions (FAQs) on our website at:

RESOURCES

The Rest of the Consumer Spending Story

Retail and services together represent what's commonly referred to as consumer spending. Quarterly Services Survey (QSS) revenue comprises roughly 2/3 of the personal consumption expenditures component of the U.S. Gross Domestic Product (GDP) measured by the Bureau of Economic Analysis (BEA). The third quarter 2024 Quarterly Services Report was released on November 19, 2024 at 10:00 AM. Learn about historical revenue trends for certain industries going back 15 years and other data, such as inpatient days and discharges for hospitals, by visiting https://www.census.gov/services/index.html

API

The Census Bureau's application programming interface lets developers create custom apps to reach new users and makes key demographic, socio-economic and housing statistics more accessible than ever before. <www.census.gov/developers/>

FRED Mobile App

Receive the latest updates on the nation's key economic indicators by downloading the FRED App < https://fred.stlouisfed.org/fred-mobile/ for both Apple and Android devices. FRED, the signature database of the Federal Reserve Bank of St.

Louis, now incorporates the Census Bureau's 13 economic indicators.

###

* The 90 percent confidence interval includes zero. There is insufficient statistical evidence to conclude that the actual change is different from zero.

Source: U.S. Census Bureau, Advance Monthly Retail Trade Survey, January 16, 2025. (Project No. P-7504206 / Approval CBDRB-FY25-0002), Table 3 provides estimated measures of sampling variability. Additional information on confidentiality protection, sampling error, nonsampling error, sample design, and definitions may be found at www.census.gov/retail/how_surveys_are_collected.html.

⁽NA) Not available (a) Advance estimate (p) Preliminary estimate (r) Revised estimate

⁽S) Estimate does not meet publication standards because of high sampling variability (coefficient of variation is greater than 30%), poor response quality (total quantity response rate is less than 50%), or other concerns about the estimate's quality.

⁽¹⁾ For a full description of the NAICS codes used in this table, see https://www.census.gov/naics/.

⁽²⁾ Estimates are concurrently adjusted for seasonal variation and for holiday and trading day differences, but not for price changes. Concurrent seasonal adjustment uses all available unadjusted estimates as input to the X-13ARIMA-SEATS program. The factors derived from the program are used in calculating all seasonally adjusted estimates shown in this table. Year-to-date seasonally adjusted sales estimates are not tabulated. Adjustment factors and explanatory material can be found on the Internet at http://www.census.gov/retail.

⁽³⁾ Advance estimates are based on early reports obtained from a small sample of firms selected from the larger Monthly Retail Trade Survey (MRTS) sample.

All other estimates are from the MRTS sample.

⁽⁴⁾ GAFO represents firms which specialize in department store types of merchandise and is comprised of furniture & home furnishings (442), electronics & appliances (443), clothing & accessories (448), sporting goods, hobby, musical instrument, and book (451), general merchandise (452), office supply, stationery, and gift stores (4532).

⁽¹⁾ Estimated measures of sampling variability are based on estimates not adjusted for seasonal variation or holiday or trading day variation. Medians are based on estimates for the most recent 12 months.

Source: U.S. Census Bureau, Advance Monthly Retail Trade Survey, January 16, 2025. (Project No. P-7504206 / Approval CBDRB-FY25-0002), Additional information on confidentiality protection, sampling error, nonsampling error, sample design, and definitions may be found at www.census.gov/retail/how_surveys_are_collected.html.

⁽²⁾ These columns provide measures of the difference between the advance-to-preliminary and preliminary-to-final estimates of month-to-month change for the same pair of months as measured by the Advance sample and MRTS sample. The average and median revisions are based on estimates for the most recent 12 months
